Abstract of JP 2002251347 (A)

PROBLEM TO BE SOLVED: To update the property information of a driver with a simple operation on a network. **SOLUTION:** A setup program in an installation server device 385 accesses an API (application program interface) of an OS or a system call without waiting for a transmission request for driver information from client devices 381 to 383, performs a driver setup instruction and controls processing that distributes a driver. The setup program concurrently controls the OS so as to transmit the driver property information to be transmitted to the client devices 381 to 383 from the server device 385 spontaneously or by waiting for requests from the client devices 381 to 383 on which a driver have been installed.
